GRAYSCALE
16Bit

The difference between an 8-bit grayscale image and a 16-bit grayscale image refers to the amount of tonal information each pixel can represent. Let's understand better:

In short, the main difference is in the number of shades of gray that each pixel can represent.

A 16-bit image offers a much wider range of tonal variations compared to an 8-bit image, which can be important in applications where accuracy and visual fidelity are critical.

◆ About 7860Hz

Product resolution quality

Motion Smoothness: Higher refresh rates generally result in smoother movements on the screen, reducing the effect of motion blur and making the visual experience clearer and more enjoyable.

Improved Viewing Experience: Especially in high-speed contexts, such as sporting events or fast-moving content, a higher refresh rate helps prevent visual artifacts, providing a more authentic and immersive experience.

Reduced Eyestrain: Higher refresh rates can help reduce eye fatigue by reducing screen flicker, which can be a concern in artificial lighting environments or for people sensitive to these effects.

Greater Accuracy and Response in Critical Applications: In cases where accuracy and response time are crucial, such as in medical applications, engineering or simulation environments, a high update rate can guarantee a more accurate and instantaneous representation of information.

Ability to display high-resolution content and details: On large-format or high-resolution screens, a higher refresh rate can be crucial to maintaining the quality and clarity of the content displayed.

REFRESH RATE
7860Hz

◆◆ Product main features

Redundancy

POWER BACKUP SYSTEM

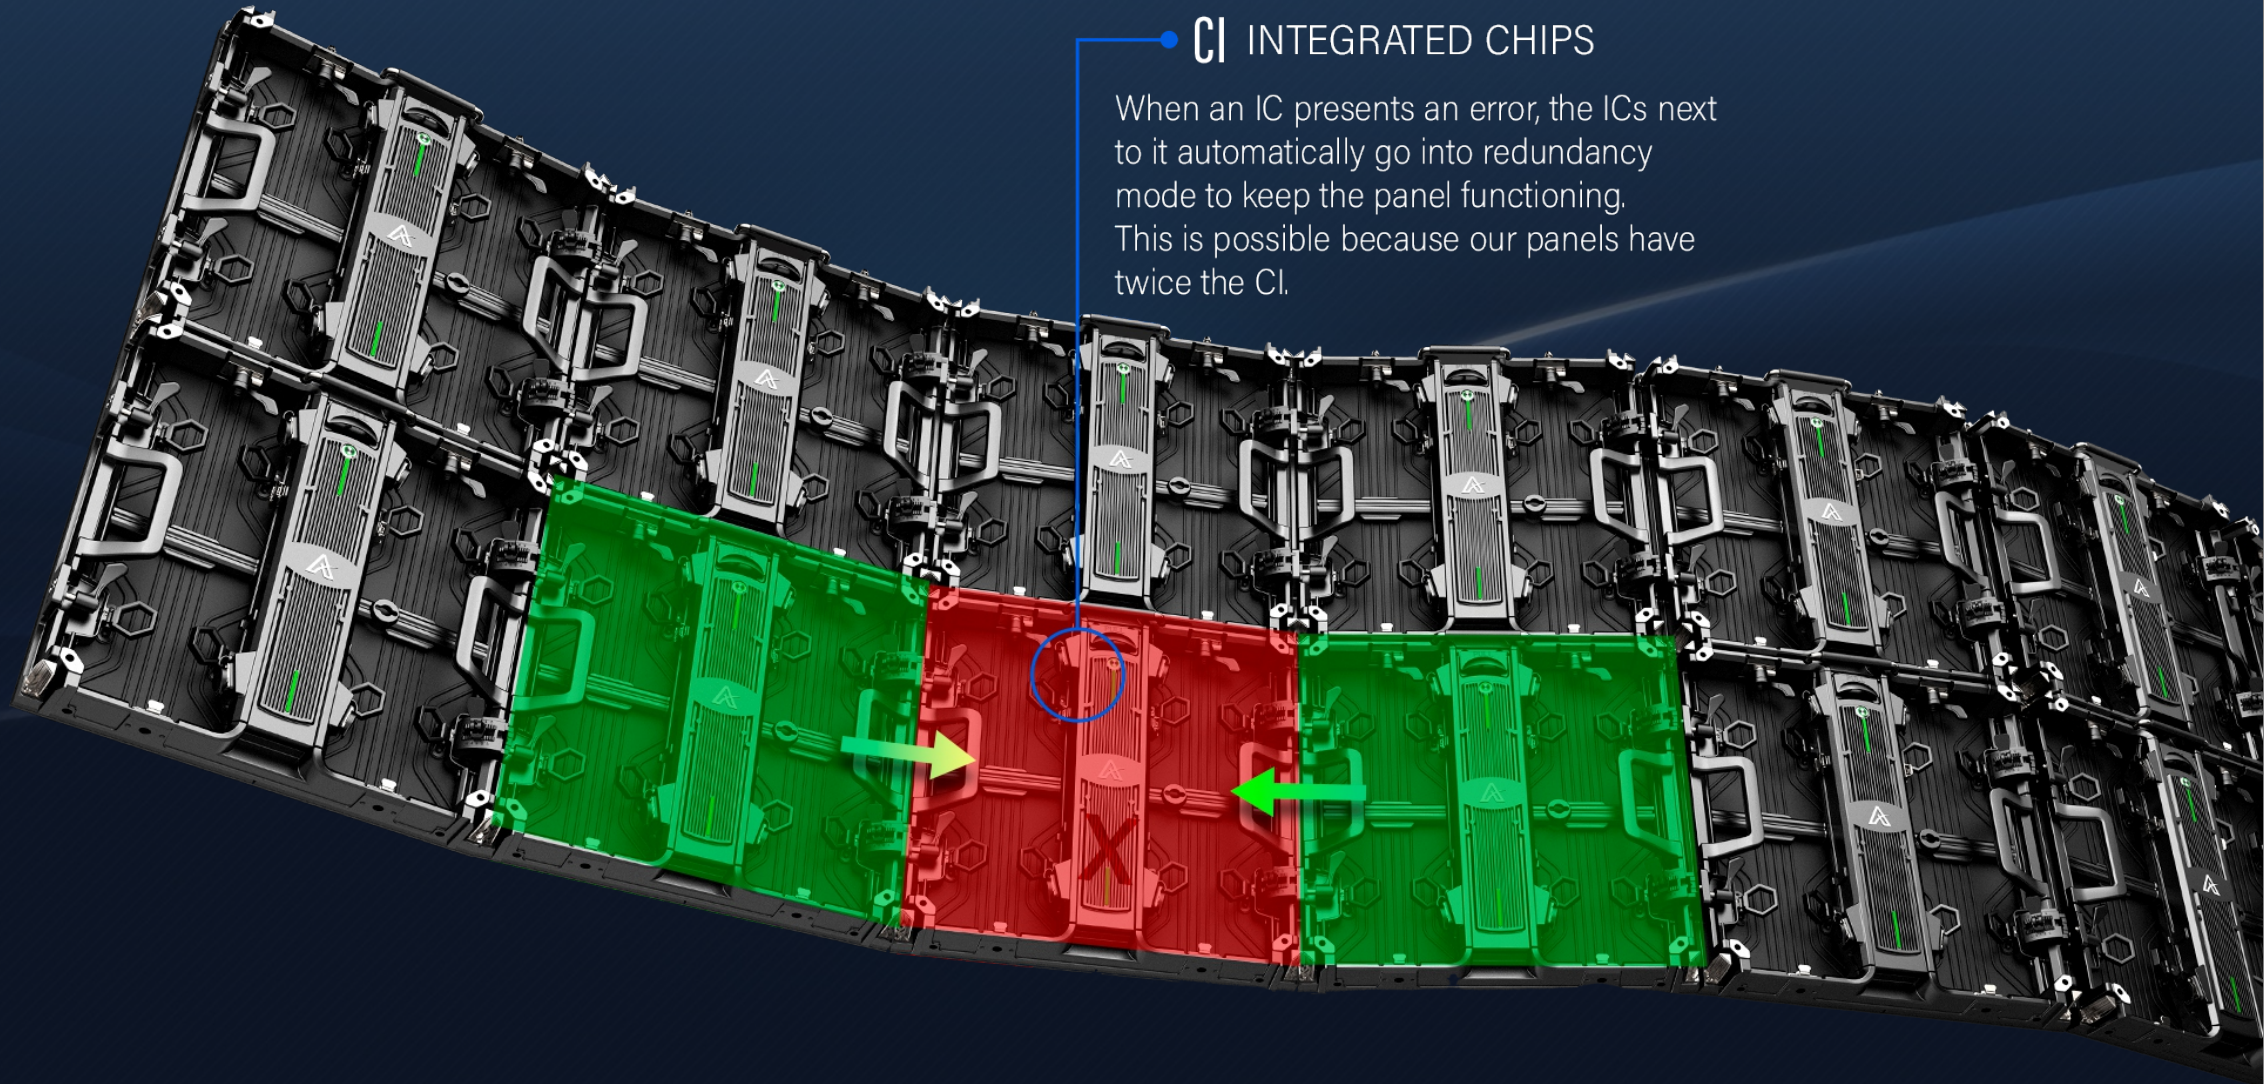

● SOURCE

If the power supply to any cabinet stops working, cabinets on the same power line will automatically share power. Keeping it on during use.

◆◆ Product main features

CI INTEGRATED CHIPS

When an IC presents an error, the ICs next to it automatically go into redundancy mode to keep the panel functioning. This is possible because our panels have twice the CI.

Product Application

Suitable for rental, events, fairs, exhibitions, theme parks and other fields.

Application scenario

Ø Branded shop window screens in retail malls.

◆ Application scenario

∅ Creative art displays for richer visual effects.

Application scenario

Ø Airports, stations, exhibition halls square column screen.

◆ Application scenario

Ø LED canopy screen is suitable for hotel lobby, large shoppingmall, commercial pedestrian street, city centre square, large stage and other large buildings on the ceiling.
